Problem Statement

To design and implement a centralized digital platform that connects students, seniors, and alumni for **mentorship**, **collaboration**, and **opportunity sharing**. The system aims to provide structured access to **career guidance**, **academic resources**, and **internship** or **placement opportunities**. It also includes features such as a student **marketplace** and a **lost-and-found** module to support daily campus needs. The platform intends to improve communication, resource sharing, and overall student growth within the academic community.

Motivation

- Lack of a structured platform to connect students with seniors and alumni for mentorship.
- Difficulty in finding referrals for internships and job opportunities.
- Absence of a centralized system for buying/selling academic items within the campus.
- Inefficient methods to report and track lost and found items.
- Fragmented communication through different platforms like WhatsApp, social media, etc.
- Students often face difficulty in finding suitable teammates for academic projects, hackathons, and collaborative activities.

OBJECTIVES

The main objectives of the project are:

1. To develop a **centralized web platform for the college community**.
2. To create a **mentorship system connecting students with seniors and alumni**.
3. To build a **campus marketplace for buying and selling items safely within the college**.
4. To implement a **lost and found system for reporting missing items**.
5. To enable **sharing of opportunities such as internships and referrals**.
6. To design a **secure and user-friendly platform with role-based access (Student, Alumni, Admin).**

Literature Survey

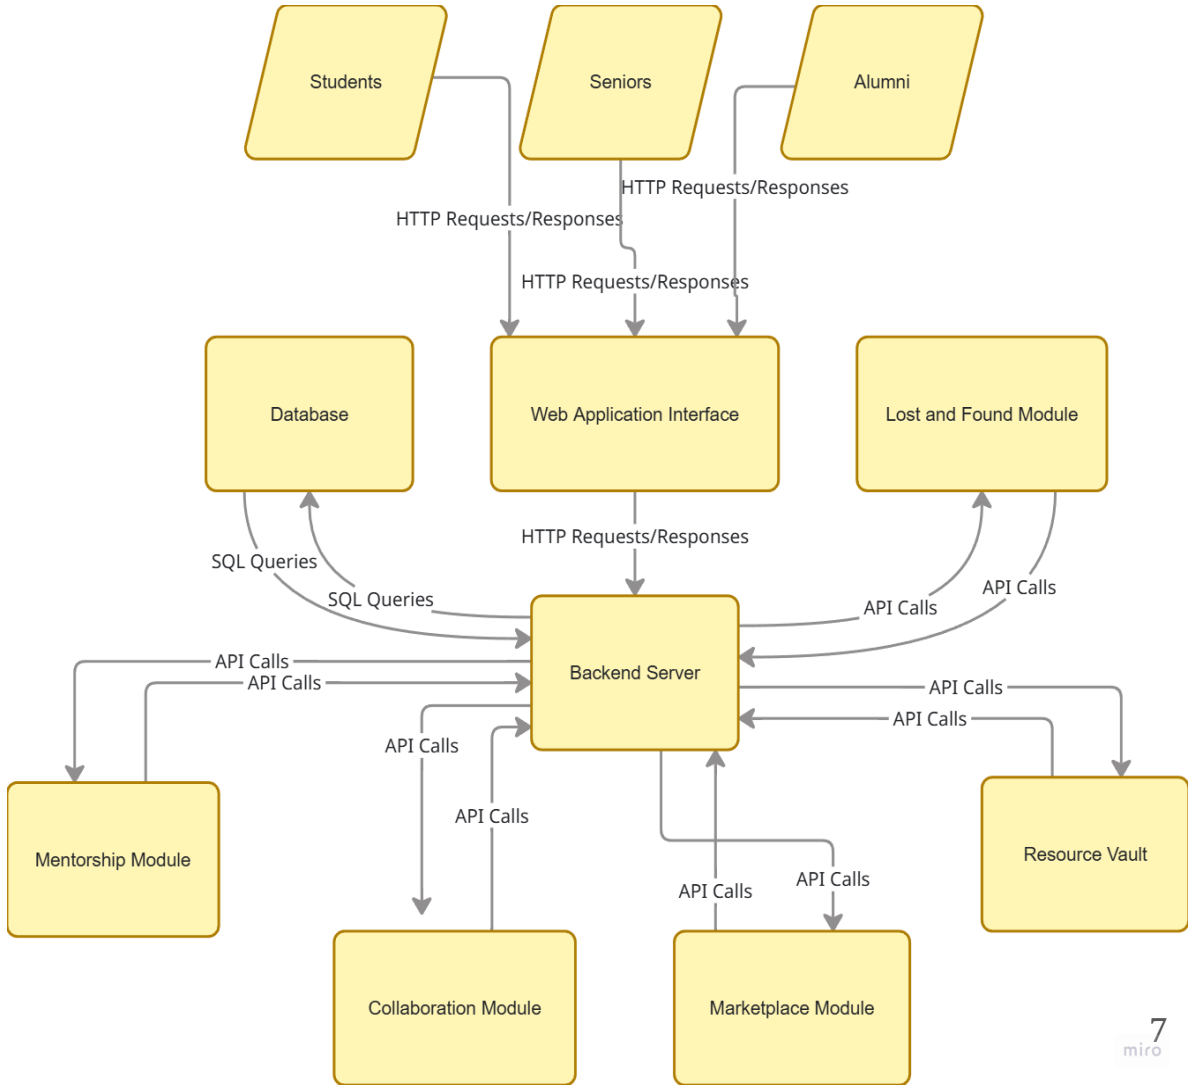
Sr.	Year	Paper Title	Author	Abstract	Features	Gaps
1.	2020	Online Alumni Networking Platforms	Networking Platforms	This study explores digital platforms designed to connect alumni and current students for mentorship, networking, and career development. The system improves communication between graduates and students through structured networking tools..	1. Alumni profile creation with professional details (company, role, experience). 2. Mentor–mentee matching based on career interests. 3. Direct messaging and discussion forums between students and alumni. 4. Career guidance sessions and webinar scheduling. 5. Alumni job and internship posting system.	1. Platform success depends on active alumni participation. 2. No automated AI-based mentor matching system. 3. Limited integration with external job portals like LinkedIn. 4. Lack of analytics to track mentorship effectiveness.
2	2021	University Marketplace Systems	David Brown, Emily Johnson	This research discusses the development of online marketplace platforms within universities that allow students to buy and sell academic materials and personal items securely.	1. Student login authentication using university email IDs. 2. Product listing system for books, notes, electronics, and accessories. 3. Search and filter functionality for items by category or price. 4. Peer-to-peer messaging for buyer–seller communication. 5. Product rating and feedback system.	1. Requires strict moderation to prevent fake listings. 2. No integrated online payment gateway. 3. Limited verification of product authenticity. 4. Platform restricted to campus users only.
3	2023	Web-Based Student Collaboration Systems	Daniel Wilson, Olivia Taylor	This paper presents a web-based platform that supports collaboration among students for projects, teamwork, and sharing academic resources.	1. Project group creation for collaborative assignments. 2. Shared workspace for uploading documents and resources. 3. Real-time chat and communication between team members. 4. Task management system for assigning project responsibilities. 5. Centralized repository for academic materials.	1. Strong dependence on stable internet connectivity. 2. Lack of integration with university LMS platforms. 3. Limited version control for shared documents. 4. Requires administrative monitoring to manage misuse.

Methodology/ Proposed system block diagram

Workflow

1. Users (students, seniors, and alumni) register on the platform by providing their basic information and academic details.
2. Students can search for mentors, collaborators, or opportunities through different modules available on the platform.
3. The system processes user requests and retrieves relevant data such as mentors, project collaborators, or marketplace listings from the database.
4. Students can interact with other users through modules such as **Mentorship, Collaboration Hub, and Marketplace**.
5. The platform allows users to share study resources, post project opportunities, and find suitable teammates for academic projects or hackathons.
6. Users can report or view lost and found items within the system.
7. All user activities and data are securely stored and managed in the database for efficient retrieval and system management.

Block Diagram



Software and Hardware requirements

Software Requirements :

1. Python
2. Django Framework
3. HTML, CSS, JavaScript
4. MongoDB/sqlite3 Database
5. VS Code / PyCharm
6. Web Browser (Chrome)

Hardware Requirements:

1. Processor: Intel i5 or above
2. RAM: Minimum 8 GB
3. Storage: 256 GB SSD or above
4. Internet connection
